Acoustic Imaging Air Leak Detection

- Graphical user interface allows for immediate locating of leaks in real time
- No "warmer/colder" leak hunt
- Accurate from over 95 feet away
- High sensitivity, capable of pinpointing multiple leaks in a small area
- Able to detect leaks in presence of factory noise

15.75" square mic and camera system is portable and light, requiring only USB connection.

Simple interface shows precise location of leaks.

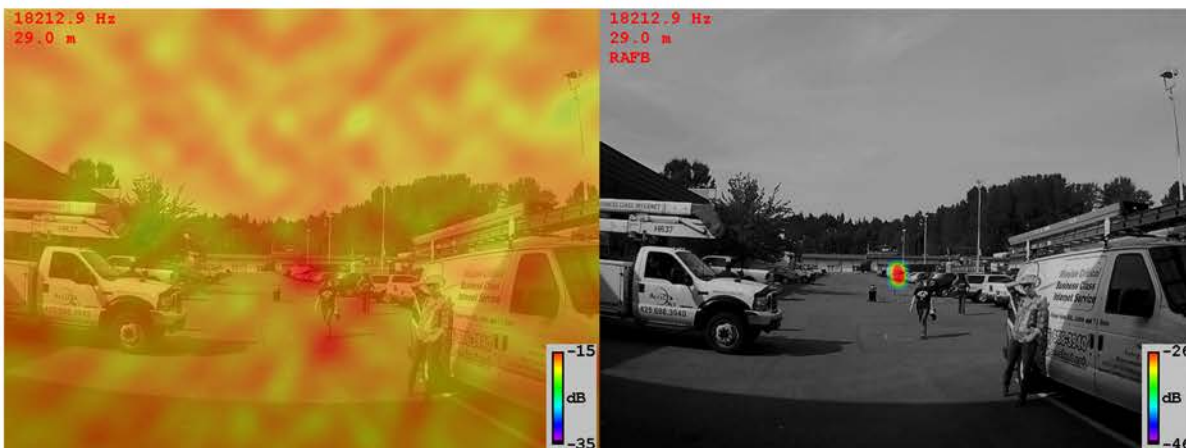

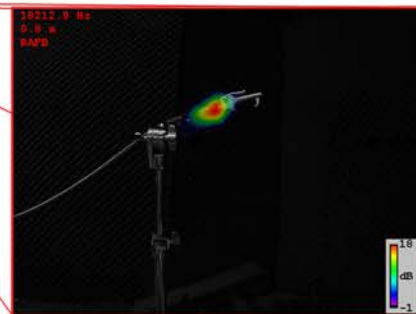

Image shows filtering process that allows ambient noise to be excluded in real time. Image to the right shows air leak at a distance of 98 feet, highlighted in red.
